

Reliable energy supply from the HV battery to widely used refrigeration units

Our vehicles have been extensively tested with a wide range of refrigerated units, ensuring reliable energy supply directly from the HV battery. Leading refrigerated unit manufacturers officially confirm compatibility with our truck architecture, giving customers confidence in seamless operation.

The vehicles are equipped with HV AC ePTO and a waiting mode function that allows controlled, continuous powering of refrigerated units even when the key is off. Vehicle software can also be adapted to specific units, optimising performance and energy management for every application.
